

# LITTER HOSE OPTION FOR PELICAN

The Elgin Pelican P and Pelican P Waterless Dust control are now available with a Litter Hose option. The Litter Hose, made from a 6 inch flexible hose and hand held nozzle, is a great tool for leaf and litter clean up as well as removing sand and gravel from hard to reach places.

Unlike hoses on competitive units that require block off plates and hopper lifting, the Pelican Litter Hose is completely self contained and requires nothing more than selecting the function from the cab.

The Litter Hose option features a volume reduction system including an alloy shredding fan designed to reduce the volume of litter and leaves while still allowing the passage of sand and gravel (see chart below). There is also a shallow pit cleaning option with a special sludge/liquid suction tip and "tee" handle.
